I. ANNOTATION

Business information systems (BIS) have strategic importance for the competitive performance of modern companies. They are complex, highly automated, dynamic systems, entailing the application and integration of various information technologies. Consequently, today's users must understand the concepts of BIS and the approaches to their development. This namely determines the targets of the course. First of all, some theoretical essentials of BIS are covered. The main activities and stages in the systems development, and some approaches such as the life cycle model, outsourcing, prototyping, buying a package, etc., are presented. Data bases are of a particular interest in the course. Some modern trends in BIS are also presented.

The students will be challenged to take part in discussions, and they will also face working in teams on course works.
